[Spotting 2 Days After Sex](#)

## GET SYMPTOMS LOOKED AT

Guys, if you experience:

- **Bleeding**
- **Discharge from the penis**
- **Pain during ejaculation**
- **Any rashes and sores around the genital area**

...get checked at your nearest sexual health clinic or see your GP as soon as possible.

Girls, if you experience:

- **Unexplained bleeding**
- **Pain when you pee**
- **Unusual discharge**
- **Itching**
- **Sores**

... get checked at your nearest sexual health clinic or see your GP as soon as possible.

## TIMING DOESN'T MATTER

Regardless of what time of the month or position you had sex in, **there's always a risk of pregnancy with unprotected sex.**

The "withdrawal" method is also not a reliable form of contraception!

## EMERGENCY COIL

The IUD (intrauterine device, or coil) can be fitted up to **5 days after unprotected sex.**

This is the most effective form of emergency contraception, and also provides **ongoing contraception.**

## PICK UP FREE CONDOMS

Avoid carrying around an out-of-date condom by getting **free ones from a sexual health clinic or GP surgery.**

Remember, **one size won't fit all** – one that's too big or too small can slip off during sex.

## EMERGENCY CONTRACEPTIVE PILL

Depending on the type, the morning after pill can be **effective for 3-5 days** after unprotected sex.

You wouldn't be alone in using it: **1 in 10 women aged 20-29 have taken it at least once.**

## HEP C & SYPHILIS

Hepatitis C and syphilis are on the rise among gay men.

**Be proactive by practising safe sex** and never sharing needles, and get screened if you're concerned.

## SAME-SEX SEX

STIs can be spread by sharing toys and through oral sex.

Be safe next time by using **a dental dam or another form of latex barrier**, avoiding sharing toys and always washing them after use.

One Stonewall survey found that less than half of lesbian and bisexual women had ever had a sexual health test – **but 50% of those who had been screened had an STI.**
